

Why AcellFX?

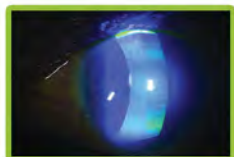

At BLYTHE MEDICAL, we understand not all allografts are created equal. That's why we've harnessed the power of science and nature, developing a minimally manipulated acellular allograft using a process that eliminates all potentially harmful additives like germicide and ethanol while retaining the maximum number of viable bioactive components.

Fluorescein dye with cobalt blue filter - showing the epithelial defect with AcellFX® allograft in place.

Epithelial defect is closed after five days. The amniotic membrane will generally dissolve over 2-8 days.

Post healed eye using fluorescein dye and blue filter. There is no evidence of the epithelial defect.

Patient Benefits

- Comfortable
- No painful ring required for placement
- Translucent upon application
- Bioactive peptides promote healing
- Reduces need to callback or revisit physician office

Ordering is easy, naturally.

Orders can be placed 24/7 through orders@blythemedical.com, or our phone messaging system - Monday through Friday 8 a.m. to 6 p.m. EST

The *BEST* choice
for your patients,
NATURALLY.

AcellFX delivers, naturally.

AcellFX® is very easy to apply, facilitating a uniform implementation across your practice. No up/down orientation means you'll get it right the first time, without having to lift and reposition the tissue. There is no need for an outer ring device that complicates the application process and is uncomfortable for the patient.

AcellFX Acellular Amniotic Membrane.

Applications

- Corneal ulcers including neurotrophic keratitis
- Keratitis
- Pterygium, post-keratoplasty, glaucoma or cataract
- Chemical trauma
- Bullous keratopathy
